

VALIDATION SUMMARY

Software Quality Verification – Validation Findings Report

Document Type	Validation Summary
Version	1.0
Application	Student Registration System
Prepared By	Ruknuddin Asrari
Email	ruknuddin.asrari@thecareerinsights.com
Job Title	Software Quality Engineer
Department	IT Software Development
Organisation	The Career Insights Hub LLC
Date	2026
Build Version	Build-1.0
Total Checkpoints	63
Passed	33
Failed	14
Warning	13

Prepared by Ruknuddin Asrari | ruknuddin.asrari@thecareerinsights.com | Software Quality Engineer | The Career Insights Hub LLC

1. Validation Overview

This Validation Summary consolidates the findings from the full QA Checklist. It provides an analysis of what passed, what failed, the risk associated with each failure, and the recommended action. This document is intended to be shared with the development team and project stakeholders to support the go/no-go release decision.

63	33	14	13	3
Total Checkpoints	PASS (52%)	FAIL (22%)	WARN (21%)	N/A (5%)

2. Validation Results by Category

Category	Items	Pass	Fail	Warn	N/A	Pass Rate
Functionality	21	13	7	0	1	62%
Input Validation	14	7	4	3	0	50%
Usability	14	7	1	5	1	50%
Security	5	3	1	1	0	60%
Performance	4	3	0	1	0	75%
Documentation	5	2	1	2	0	40%
OVERALL	63	33	14	13	3	52%

3. Failed Checkpoint Detail

The following 14 checkpoints returned a FAIL result. Each failure is listed with its severity, the associated defect reference, and the required action before release.

ID	Checkpoint	Severity	Defect Ref	Required Action
FC-002	Duplicate email registration not rejected	Critical	BUG-003	Add server-side unique email constraint — retest after fix
FC-008	Login accepted with wrong password	Critical	BUG-001	Fix authentication logic — retest login suite
FC-009	No account lockout after 5 failed attempts	High	BUG-002	Implement rate limiting / lockout mechanism — retest
FC-010	Session persists after logout via back button	High	BUG-006	Invalidate session server-side on logout — retest TC-017
FC-013	Duplicate course enrollment accepted	High	BUG-005	Add unique constraint on student-course enrollment — retest
FC-014	Full course enrollment — seat count goes negative	Critical	BUG-009	Fix capacity check before enrollment insert — retest TC-021, TC-041
FC-018	Oversized photo upload accepted	Medium	BUG-010	Enforce file size limit server-side — retest TC-029
FC-020	Empty Last Name field saved	Medium	BUG-008	Add backend required field validation — retest TC-030
FC-026	Student accesses Admin Dashboard via URL	Critical	BUG-007	Enforce server-side RBAC on all admin routes — retest TC-039
VC-002	Weak passwords accepted	High	BUG-004	Enforce password complexity server-side — retest TC-005
VC-007	API bypasses frontend validation	High	—	Add server-side validation for all endpoints — regression test
VC-010	Enrollment capacity boundary not enforced	Critical	BUG-009	Same fix as FC-014 — verify across all capacity scenarios
UC-008	Back button restores session after logout	High	BUG-006	Same fix as FC-010 — session invalidation required
QS-014	QA sign-off blocked — open Critical defects	Critical	Multiple	Resolve all Critical/High defects — retest — obtain QA sign-off

4. Warning Checkpoint Detail

The following 13 checkpoints returned a WARN status. These do not block the release but represent known risks that should be monitored, scheduled for the next sprint, or resolved before the following release cycle.

ID	Checkpoint	Risk	Recommended Action
VC-004	Some fields missing maximum character length limits	Medium	Define and implement max-length on all remaining fields
VC-005	File type validation not fully verified	Medium	Test upload of .pdf, .exe, .html and confirm rejection
UC-007	Only Chrome 120 tested — Firefox/Edge pending	Medium	Execute core test cases on Firefox 121 and Edge 120
UC-009	404 page has no navigation back to dashboard	Low	Add 'Return to Home' button to 404 and error pages
UC-010	No loading spinner during enrollment submit	Low	Add loading indicator to prevent duplicate clicks
UC-012	Profile photo upload icon missing alt text	Low	Add alt=" or aria-label to upload icon element
QS-002	Session-after-logout not invalidated server-side	High	Linked to BUG-006 — treat as High risk until resolved
QS-005	CSRF token not verified on all API endpoints	High	Audit and apply CSRF protection to all POST/PUT/DELETE endpoints
QS-008	System not yet load tested at 50+ concurrent users	High	Execute JMeter load test before production promotion
QS-012	Browser compatibility matrix incomplete	Medium	Complete Firefox and Edge test pass before next release
QS-013	Release notes omit list of known open defects	Low	Update release notes to include open defect list for transparency

5. Release Recommendation

■ NOT RECOMMENDED FOR RELEASE

The application must not be promoted to production until all 14 FAIL checkpoints are resolved and verified. Of these, 5 are Critical severity and represent security, data integrity, and authentication vulnerabilities that pose unacceptable risk to end users. The following conditions must be met before QA sign-off is granted:

- All Critical and High severity FAIL checkpoints resolved and retested as PASS
- Regression suite executed on the fixed build with a minimum 95% pass rate
- RBAC server-side enforcement verified on all admin routes
- Account lockout and session invalidation on logout confirmed working
- Load test at 50 concurrent users executed and within SLA
- Updated release notes with open defect list provided
